

Our children's white canes

We use a high-grade aluminum alloy to manufacture our children's white canes, which makes the canes both especially lightweight and as very stable, despite the stresses a children's white cane is exposed to on a daily basis.

The handle, which is made out of turned beech treated with natural resin oils, is toxin-free and has a comfortable soft grip in all weathers.

A colorful loop has been affixed to the upper end of the handle so that the cane can be stored on wardrobe hooks.

Depending upon the desired length, our children's white canes are available as one or two-piece canes.

Comde-Derenda
Children's White Cane
for self-reliance,
mobility
and independence

A white cane for every child.

From the very beginning!

For a blind child, a white cane means freedom and independence. Early practicing makes it easier for children to get used to the cane, allowing them to satisfy their innate need for activity and exploring their environment on their own. Especially for smaller children, the „first cane“ should be robust, very light and easy to use. To meet these requirements, Comde-Derenda GmbH worked together with the association Anderes Sehen e.V. to develop a new series of white canes that have been specially adapted to meet children's needs.

Recommended as for the first steps!

What type of white cane is best for my child?

Children's white canes must meet two important criteria: they should be as lightweight as possible while still retaining stability. While adult's white canes only come up to the user's sternum, for children a length is recommended that is commensurate with the height of the child, because that allows the child to anticipate further ahead. Using a cane that is too short restricts this freedom unnecessarily, which is also why children's white canes should be replaced each year.

Children's canes that do not feature a folding or telescopic mechanism are more unwieldy, but offer the advantage that the tactile stimuli are transported „more directly“ from the ground to the hand of the child, giving an undistorted perception.

A light tip should be the cane tip of choice, especially for young children, because this allows for the exploratory behavior typical for cane use in this age group. Older children who are already proficient in the use of a cane can make the transition to a roller tip, when the child is able to handle this well.

Children's one piece white cane

Our children's one-piece white canes are available in lengths from **60 to 90 cm**. The canes have a tube diameter of 8.5 mm and a handle length of 15 cm.

Children's one-piece white canes are available in red, green, blue and white. The lower segment of the cane is covered by a reflective silver film to ensure that the cane is clearly recognized in traffic as a white identification cane, thus guaranteeing the greatest degree of safety.

The weight (in grams) of the children's one-piece white cane and tip is about equal to its length (in centimeters). For example, a children's one-piece white cane with a length of 75 centimeters weighs 78 grams.

Price of a one-piece white cane: 50 €

Children's two-piece white canes

Our children's two-piece white canes are available in lengths from **90 to 140 cm**. The upper segment (with handle) of the shaft has a length of approx. 48 cm with a diameter of 11 mm. The lower segment (with tip) of the shaft, which can be unscrewed, has a diameter of 8.5 mm. The total length of the cane can be adjusted by exchanging the lower segment, which allows to grow together with the child.

The handle segment is available in pink, blue, green, gold, leaf green and white. The tip segment is covered by a reflective silver film to ensure that the cane is clearly recognized in traffic as a white identification cane, thus guaranteeing the greatest degree of visibility.

The weight (in grams) of the children's two-piece white cane and tip corresponds to its length (in centimeters). For example, a children's two-piece white cane with a length of 115 centimeters weighs 117 grams.

Price of children's two piece cane

Complete set (incl. children's tip): 85 €

Upper segment: 55 €

Lower segment (40-90 cm): 20 €

Grows with the kid

A complete set including the children's two-piece white cane and a tip is available at a reduced price. The handle segment, tip segment and tip, however, may also be purchased individually.

The tip

Our tip, which was especially developed for the use with children's white canes, is made of white POM synthetic material and an ultralight titanium threaded pin that connects the tip to the cane. This has made it possible for us to develop a tip that is not only long-lasting, but also very light with a weight of 17 grams. In addition to this „standard“ tip, our children's canes can also be used together with any of the other tips available from our product range.

Price of the children's tip: 15 €
